COMMITS REVIEWED	FILES CHANGED	LINE MOVEMENT

Prepared from the main branch after the mobile update was committed and pushed to origin/main.

Source: Git history on main branch through commit 9f24b65

COMMIT 1 / 9F24B65

Mobile homepage, redesigned for speed and clarity

The latest commit removes unnecessary vertical space on small screens while retaining the full desktop experience and a clear route to enquiries.

Hero and first impression

+ The hero media now sits behind the content on mobile instead of occupying a separate aspect-ratio block.
+ A layered dark gradient keeps headings and calls to action readable over the video or poster image.
+ The mobile hero uses a controlled 34-36rem minimum height, eliminating the previous empty black gap.

Homepage content density

+ Division chapters use compact 16:10 imagery, tighter headings, shorter gaps and two-column feature lists where space allows.
+ Engineering accountability and global experience sections use reduced mobile padding and more compact typography.

Process redesign

+ The process area is now a compact vertical timeline: Consult, Engineer, Build, Automate and Support.
+ Step descriptions were shortened to outcome-focused copy for easier scanning.
+ The CTA remains visible as 'Start a project' and routes users directly to the contact page.

Footer optimization

+ Footer padding, logo, social buttons, navigation and enquiry cards are smaller on narrow screens.
+ The footer navigation label is simplified from 'Divisions / Machines' to 'Divisions'.

Connect / Contact Us journey on Home

The homepage keeps the contact path without adding another large space-heavy section. Users can open **Contact** from desktop or mobile navigation, select **Start a project** from the process section, use **Contact Us** in the footer, or email the dedicated casting and automation enquiry addresses. The result is a shorter homepage with the same conversion options.

Mobile validation

VIEWPORT	PAGE WIDTH	RESULT	MENU CHECK
390 x 844	390px scroll width	No page overflow	Opens, locks page, all links visible
360 x 800	360px scroll width	No page overflow	Same behavior confirmed

Production build completed successfully. The mobile navigation contains Home, About Us, Divisions, Blogs, Careers and Contact; the separate Machines menu item is removed.

COMMIT 2 / 865325E

A division-first machine catalogue

Product discovery now begins with the business division, reducing menu clutter and preventing users from landing on an unfiltered machine catalogue.

Navigation and information architecture

+ Removed the standalone Machines item from the shared navigation, including the mobile menu.
+ Divisions is marked active while a user is browsing division pages or machine catalogue routes.
+ Visiting /machines without a division now redirects to /divisions.

User journey after the update

Navigation -> Divisions -> select Investment Casting Machinery or Robotics & Automation -> open the already-filtered catalogue -> view a machine or automation solution. Direct filtered URLs remain supported for valid casting and robotics views.

Catalogue audit coverage

+ The audit now checks /machines?division=casting instead of relying on an unfiltered listing.
+ It verifies that the base /machines route redirects to /divisions with a valid redirect status.
+ The generated audit output records redirect status and target location for release diagnostics.

Developer configuration

+ The React Refresh only-export-components rule was disabled in ESLint configuration.
+ The catalogue route imports and uses the router redirect helper before rendering an unscoped page.
+ Change footprint: 4 files, 40 insertions and 7 deletions.

ENTRY	BEFORE	AFTER
Main navigation	Divisions and Machines appeared separately	One clear Divisions entry
/machines	Could show an unfiltered catalogue	Redirects to /divisions
Filtered catalogue	Supported	Supported and now the intended entry path

COMMIT 3 / D910B83

About page global presence restored

The About page now gives Modtech's international reach a dedicated, cinematic section instead of compressing global presence and certification into one card grid.

Global presence experience

+ Introduced a full-width dark section with a global map video on medium and larger screens.
+ Added layered gradients and a subtle grid so the content remains readable over the media.
+ New headline: 'Expanding horizons. Engineering without borders.'
+ Supporting copy highlights delivery across 45+ countries with commissioning, remote diagnostics and lifecycle service.
+ Compact badges surface the three key proof points: 45+ countries, worldwide support and remote diagnostics.

BEFORE	AFTER
Global reach and certification shared a two-card certifications section. The international message was present but visually secondary.	Global presence has its own immersive section. Certification follows in a separate, more focused block with its document CTA preserved.

Responsive behavior

The video source is limited to screens at least 48rem wide and respects reduced-motion preferences. Smaller screens retain the structured dark background, gradients and content without paying the cost of autoplay video.

Certification section refinement

+ Certification remains directly after global presence with tighter vertical spacing.
+ The layout changes from a stacked card to a wide responsive grid, keeping certificate details easy to scan.
+ The 'View certificate' action remains available and the quality message is visually separated from the global story.

Change footprint: 1 file, 64 insertions and 42 deletions.

RELEASE OVERVIEW

Files, outcomes and handoff

Together, these commits simplify navigation, reduce mobile scroll burden and strengthen the company's global positioning without removing critical enquiry routes.

FILE	COMMIT	PURPOSE
src/routes/index.tsx	9f24b65	Mobile hero, divisions, proof sections and process timeline
src/components/page-shell.tsx	9f24b65	Compact footer and simplified Divisions label
src/components/hero-video-background.tsx	9f24b65	Correct video/poster layering
src/content/site-data.ts	9f24b65	Short process descriptions
src/components/site-header.tsx	865325e	Remove Machines nav item and unify active state
src/routes/machines.tsx	865325e	Redirect unfiltered catalogue visits
scripts/audit-catalogue-pages.mjs	865325e	Validate redirect and filtered catalogue
eslint.config.js	865325e	Align lint rule with current module patterns
src/routes/about.tsx	d910b83	Global presence and certification redesign

Current release status

The latest mobile commit is pushed to **origin/main** at **9f24b65d4b1b30c47f3487c4109f13dcffe702ab**. Local and remote main were verified to match after the push, and the working tree was clean at handoff.

Net effect

+ Shorter, more usable mobile homepage with no horizontal overflow at tested narrow widths.
+ A clearer product discovery model centered on Divisions rather than an ambiguous unfiltered Machines entry.
+ A stronger About page story for global delivery, support and quality certification.
+ Contact access remains available at every important decision point without adding unnecessary homepage height.

Report scope: commits 9f24b65, 865325e and d910b83 on the main branch. Prepared from the repository's Git history and verified source diffs.
